

I am totally against Broadband Over Power Line (BPL)
Docket - 03-104.

I am an amateur radio operator, and the interference that will
cause to the high frequencies will destroy any type of amateur
radio communications.

As we know that amateur radio communications has been the main line
of communications for many types of disasters and public service
events. Which could put all of the U.S.A. in danger. In an event
that normal law or public communications were down or disabled.

Many who travel via maritime use amateur radio to get weather
reports and communicate for various reasons, or in emergencies.
Amateur radio is vital to their well being.

Many things of today are here because amateur radio operators
explored different things and invented such things as well radio!
And many other facets of electronics and how we communicate today.
With out amateur radio who knows what the world may miss out on.

Thank you,

David Ranney KT0R
